# Connecting people to people, people to things, and things to things.

IoT

The Internet of Things (IoT) refers to a network of billions of physical devices around the globe equipped with Internet-connected sensors that provide ongoing, real-time data collection, analytics and sharing. With IoT working collaboratively and contextually with SYSPRO ERP, manufacturers and distributors can seamlessly enable their digital business transformation.

KEY USES

Streamlines and automates business processes
by automatically delivering business intelligence and alerts to operators and service agents.

Manages Inventory in the warehouse in real-time
using IoT sensors to monitor and track incoming and outgoing items.

Equips individual items to continuously update location and movement
For example, cases, pallets, containers and vehicles with auto identification tags tied to GPS-enabled connections.

Enhances customers user experience and improves service delivery
by connecting the warehouse to e-commerce platforms.

How You Benefit

Pick up on inefficiencies and problems sooner, saving time and money.

Receive unprecedented levels of visibility throughout the entire supply chain, anywhere in the world.

Get broader, more detailed actionable insights.

Let SYSPRO ERP help you take advantage of the latest technologies and positively reposition your organization. Together we can turn BlueSky ideas into reality, with the limitless possibilities of digitalization.
